

Geological Work Bench

A modular, versatile and flexible workbenches that can be adapted to suit the user – a key requirement in ergonomic work bench design.

A standard unit is 1.5m in length and can be easily and securely be joined to form any length logging table. The Bench utilizes small plastic rollers mounted in a roller bed, which provide a smooth and safe operation. The plastic rollers also reduce noise compared to existing roller tables.

Manufactured from extruded anodized aluminum profile to provide a quality, high precision, robust product that will not rust.

Adjustable to suit specific requirements: the height, width between the rollers and bench inclination can be changed by simply loosening the screws with an Allen key making the UCP Africa work bench a market leader simply due to the usability of the bench as it will suit almost every requirement.

Benefits at a glance:

- Fully Adjustable – height, width of rollers and angle of work surface.
 - Increases efficiencies, as your employees are able to work in a comfortable environment – tailor-made for each projects requirement.
 - Logging can be performed standing up, sitting down or seated at a bench.
- Flexible modular design with extensive range of accessories.
 - Find a solution tailor-made for your requirements.
- The unique added benefit of angle adjustment, allows you to see and access more of your core tray while seated.
